

VAMPIRE – User Manual

1. Introduction:

Voice Activated Music Player Interface (Really Cool) or **VAMPIRE** is a voice-controlled music player for users who want full control over their media. Set your own wake word, import your own digital song library, and play your own favorite songs instantly!

2. System Requirements:

- Local Network Connection
- Java 17 or newer versions
- Maven Wrapper (included in Repo)

3. Installation:

Run the following command in your terminal to clone our repository:

- git clone https://github.com/phajj/CSC2620_Final_Project_Haji_Higgins_Palmer

4. Building the Project:

- Windows:
 `.\mvnw.cmd` package
- Unix based (Mac/Linux):
 `chmod +x mvnw`
 `./mvnw` package
-

5. Setting Up the Vosk Speech Recognition Model

Vosk requires a local model directory to perform speech recognition. The lightweight English model is recommended as it runs faster and has a smaller file size. (Recommended model: `vosk-model-small-en-us-0.15`)

- Download the model from the Vosk model page: <https://alphacephei.com/vosk/models>
- Direct download link for the recommended lightweight model:
 `vosk-model-small-en-us-0.15.zip`
- Extract the zip file. You should get a folder named `vosk-model-small-en-us-0.15`.
 Renamed the folder 'model'
- Place the extracted folder in the project root.

4. Storing Songs

Store your own song library in src/server/resources. Only accepts **MP3s**.

5. Launching the Server:

- Navigate to src/server/ServerMain.java to start the server
- Now locate your machine's IP address, you can do this on
 - Windows by running ipconfig in the terminal
 - Mac/Linux by running ifconfig in the terminal
- Copy the IPV4 Address for all clients who want to connect to your server (on your LAN) to use

6. Launching the Clients:

- Navigate to src/client/gui/LoginScreen.java
- Replace DEFAULT_HOST value from "localhost" to your server's IP address inside double quotations on line 10

```
public class LoginScreen {  
  
    public static final String DEFAULT_HOST = "localhost";  
    public static final int DEFAULT_PORT = 5555;  
  
    private JFrame frame;  
    private JTextField usernameField;  
    private JPasswordField passwordField;  
    private JLabel messageLabel;  
    private JLabel connStatusLabel;  
    private ServerConnection serverConn;  
}
```

- Now run src/client/gui/LoginScreen.java

7. Signing-In:

If first time using, please click the **Register** button to begin. After registration you will be prompted to setup a keyword. (see **7 Setting Key Word**)

- Username Requirements:
 - Can be 3-16 characters
 - Can include letters, numbers, and underscores
 - Cannot include spaces or special characters
- Password Requirements:
 - Must be at least 6 characters long

- Must contain at least one letter (A–Z or a–z)
- Must contain at least one digit (0–9)

8. Setting Key Word:

- If returning to the application with the same login, click the **"Setup Keywords"** button on the login screen. This opens the keyword setup screen directly without needing to log in first.
- If registering a new account, you will be prompted to choose a keyword after registration.

9. Voice Commands

VAMPIRE automatically begins listening to the microphone after app is started

- Clearly say your keyword out loud
- You will see the status label change to show **[Recording]**
- Next clearly say your command (e.g. "PLAY Never Gonna Give You Up")
- Finish your command and stop talking. After 3 seconds of silence it sends the command to the server.

Currently Available Voice Commands:

- **play [song name]**
- **stop**
- **pause**
- **resume**

Thank you for using our app!
Peter Hajj, Jackson Higgins, Matthew Palmer
